Table of Contents

Preface: The 6th National Conference on Mathematics and Mathematics Education (SENATIK)	010001
Committee: The 6th National Conference on Mathematics and Mathematics Education (SENATIK)	010002

MATHEMATICS

Homomorphisms and (λ, μ) – Fuzzy subgroup Saman Abdurrahman	020001
Analysis of scientific learning using interactive videos on mathematics communication ability of students of SMP N 05 city of Bengkulu Padila Akbar, Fatrima Santri Syafri, Nur Salamah, Maryani, Sintia Lorenza, and Herawati	020002
Mathematic connection analysis of students in completing linear programs based on mathematics ability Anggraini, Cahyani Rahmadani Dj Hanusu, and Muh. Hasbi	020003
Implementation of reciprocal teaching models to increase the capability of mathematical creative thinking skills Lilik Ariyanto, S. Supandi, Widya Kusumaningsih, and Putri Novitasari	020004
Analysis of students' mathematical reasoning ability using connecting, extending, review (CER) learning model Andi Muhammad Irfan Taufan Asfar, Andi Muhamad Iqbal Akbar Asfar, and Andi Nurannisa	020005
Making ethnomathematics-based learning videos Abdul Aziz and Iswahyudi Joko Suprayitno	020006
Geometric thinking profile of deaf middle school students based on van hiele level during the Covid-19 pandemic Ni Kadek Dianita, St. Budi Waluya, and Walid	020007
Reflective thinking in solving number theory problem: A case study of pre-service teacher in terms of cognitive style Widya Dwiyanti, Stevanus Budi Waluya, and Walid	020008
The effect of gender on mathematical communication skills in geometry and measurement materials Aulya Fajarwati, Fatrima Santri Syafri, Amelia Lestari, Betia Ningsih, Yusmia Rika Subekti, and Cicik Paramis Wari	020009
Difficulty analysis of solving mathematics materials of counting fraction number operating students class B Public Aelementari School 04 Lubuk Pinang, Mukomuko Regency Fatmi, Poni Saltifa, Suharli Sila Putra, Sintia Hikma Nirmal, Velya Vitaloka, and Lola Anggun Nopela	020010

Development of learning media microsoft powerpoint based on visual basic for application (VBA) Moch. Fauzi and Lukman Jakfar Shodiq	020011
Mathematics thinking process of student's in spatial visual intelligence through transcript based learning analysis method Ferry Ferdianto, St. Budi Waluya, and Nuriana Rachmani Dewi	020012
Analysis of students mathematical creative thinking ability in terms of self confidence in complex variable function courses Gunawan, St. Budi Waluya, and Nuriani Rachmani Dewi	020013
Secondary mathematics teachers' ability in solving PISA-like mathematics problems Tria Gustiningsi, Ratu Ilma Indra Putri, Zulkardi, and Hapizah	020014
Teaching mathematics online: Studies focusing on student mathematical communication Hilda Hakim and Hilliyani	020015
Mathematical connection ability of male students Nurina Happy, Puput Diyan Pratiwi, Rina Dwi Setyowati, Sutrisno, and Dhian Endahwuri	020016
Analysis validity and reliability of monitoring and evaluation final examination: Mathematics I in Computer Engineering Study Program Harizahayu, Muhammad Fathoni, and Koko Hermanto	020017
Predator-prey dynamical model with infected prey by virus and its optimal control using pesticide Teguh Herlambang, Dinita Rahmalia, Nur Aini, and Denis Fidita Karya	020018
Implementation of H-infinity and ensemble Kalman filter for whole blood (WB) estimation in PMI Bojonegoro Teguh Herlambang, Abdul Muhith, Irhamah, Mohamad Yusak Anshori, Dinita Rahmalia, and Denis Fidita Karya	020019
Analysis of factors affecting decisions to purchase Kre Alang products in Sumbawa Regency using structural equation modeling Koko Hermanto, Salman Altarisi, Silvia Firda Utami, Ryan Suarantalla, and Nurul Hudaningsih	020020
Analysis of differences in word-of-mouth factors for UTS students based on gender identity using a structural equation model Koko Hermanto, Nora Dery Sofya, and Harizahayu	020021
DIF content of math test on learning assessment in elementary school Herwin	020022
Students' adaptive reasoning in solving geometrical problem Yeni Heryani, Sri Tirta Madawistama, Stevanus Budi Waluya, and Nuriana Rachmani Dewi	020023
Problem solving ability and belief in prospective mathematics teachers Nurina Hidayah, St. Budi Waluya, and Walid	020024

Maximum turning point and final spread of COVID-19 in Indonesia: An analysis of trends and data patterns	Malik Ibrahim, Anisah, Wita Ratna Puspita, Rody Satriawan, Lalu Jaswandi, Aminullah, Johri Sabaryati, and Syaharuddin	020025
Designs of worked example to facilitate retention and transfer capability in derivatives of algebraic functions	Nur Irfani and Endah Retnowati	020026
The effect of learning style on problem solving strategies of prospective mathematics teachers	Dwi Juniati and I. Ketut Budayasa	020027
Effect of computer technology in mathematics learning: A meta-analysis	Filomena M. Kamalera, Gratiae V. Bleveni, Christine K. Ekowati, and Damianus D. Samo	020028
The stage of analysis, design, and development in the junior high school learning videos developed to strengthen mathematical reasoning	Kartinah and Dina Prasetyowati	020029
The impact of beliefs on motivation and mathematical problem-solving in prospective teacher with different personality types	Annisa Dwi Kurniawati, Dwi Juniati, and Abadi	020030
Problem-solving with Geogebra: How the relationship between reasoning and communication in mathematics	Dedek Kustiawati and Nurfadilah Siregar	020031
Designing hypothetical learning trajectory for lines and angles using Central Java traditional house context	Widya Kusumaningsih, Hartono, and Farida Nursyahidah	020032
Enhancing students' achievement in math word problems through reading comprehension and learning motivation	Merry Lapasau, Virgana, Soeparlan Kasyadi, Ira Mayasari, and Apriani Riyanti	020033
Improving mathematical adaptive reasoning through traditional game "Lojo-Lojo Pindip" based on Android	Magfirah, Andi Muhammad Irfan Taufan Asfar, Andi Muhamad Iqbal Akbar Asfar, Sugian Nurwijaya, and Andi Fauziah	020034
Montessori method to stimulate mathematical communication skills in mild intellectual disability students	Arif Muchyidin and Nanang Priatna	020035
Comparison of students' mathematics critical thinking skills through the use of learning management systems and whatsapp groups in online learning	Muhtarom, Muhammad Saifuddin Zuhri, Bambang Agus Herlambang, and Yanuar Hery Murtianto	020036

Application genetic algorithm to improve transportation problem of cement distribution using Artificial Bee Colony	Siti Mujanah, Mohamad Yusak Anshori, Dinita Rahmalia, and Teguh Herlambang	020037
Improvement habits of minds in constructing mathematical proof using DNR-model	Abdul Mujib and Firmansyah	020038
The effect of independent learning on creative thinking ability in mathematics during the Covid-19 pandemic other students of Bengkulu Tadris Mathematics	Lailatul Mukaromah, Fatrima Santri Syafri, Devi Setiowati, Apriliza Dotari, Debby Syntia Monica, and Nia Kurniawati	020039
Student literacy towards math problem solving reviewed from online addiction level games	Yanuar Hery Murtianto, Muhtarom, Bambang Agus Herlambang, Sutrisno, and Riza Oktavia	020040
Task instrument that support children's gesture with special needs learning mathematics	Sriyanti Mustafa, Baharullah, and Vernita Sari	020041
Analysis of productive thinking characteristics students in the proofing of limit functions	Nizaruddin, Sutrisno, Yanuar Hery Murtianto, Muhammad Saifuddin Zuhri, and Muhtarom	020042
Signal analysis with continuous wavelet transform	Lambang Wahyu Nugroho and Dewi Retno Sari Saputro	020043
Integration of Bugis-Makassar ethnic traditions sulapa Eppa Walasuji in developing logical-mathematical intelligence of students based on Android applications	Andi Nurannisa, Andi Muhammad Irfan Taufan Asfar, Andi Muhamad Iqbal Akbar Asfar, Adji Syaifullah, and Nurlinda	020044
Integration of Sigajang Laleng Lipa ritual in learning to improve high order thinking skills (HOTS) based on students' mathematical problem solving	Nurlia, Andi Muhammad Irfan Taufan Asfar, Andi Muhamad Iqbal Akbar Asfar, Murasyidah Masri, and Tri Puspita Sari	020045
Set covering location problem and P-median problem model in determining the optimal temporary waste disposal sites location in Seberang Ulu I sub-district Palembang	Sisca Octarina, Fitri Maya Puspita, Siti Suzlin Supadi, Rizma Afrilia, and Evi Yuliza	020046
Didactic design to improve mathematical reasoning ability of high school students on derivative application materials	Wulan Resti Oktaviani, Tatang Herman, and Darhim Darhim	020047
High logical-mathematical intelligence learner's problem-solving performance on integer operation problem	Pathuddin, Linawati, Mubarik, Fadlun, and Angraini	020048
Developing group theory textbook which connected to the school mathematics' contents	Agnita Siska Pramasdyahsari, Rina Dwi Setyawati, and Maya Rini Rubowo	020049

Mathematical model of information service pricing scheme based on utility functions of constant elasticity of substitution	Fitri Maya Puspita, Melisa Ulina, Evi Yuliza, and Sisca Octarina	020050
Profile of statistical problem-solving ability based on the mathematical disposition	Ratri Rahayu, Kartono, Dwijanto, Arief Agoestanto, St. Budi Waluya, and Nuriana Rachmani Dewi	020051
Massallo kawali tradition integrated in open time learning model improving students' flexible thinking ability	Andi Sri Rahayu, Andi Muhammad Irfan Taufan Asfar, Aisyah Nursyam, and Andi Muhamad Iqbal Akbar Asfar	020052
Strategic competence in solving-problem and productive disposition of high school students based on cognitive styles	Muhammad Syarifuddin Rahman, Dwi Juniati, and Manuharawati	020053
Design of virtual reality-based mathematics learning media on trigonometry material in senior high school	Noviana Dini Rahmawati, Achmad Buchori, and Muhammad Hafidz Azizal Ghoffar	020054
Visual representation in solving mathematics problems	Mohamad Rif'at, Nilamsari Kusumastuti, and Nurfadilah Siregar	020055
Backpropagation neural network weight training using particle swarm optimization	Mohammad Iqbal Haidar Romadloni and Dewi Retno Sari Saputro	020056
Improving the critical thinking ability of junior high school students through realistic mathematics education innovation	Asri Ode Samura, Darhim, Dadang Juandi, Arwan Mhd. Said, Karman La Nani, and Maximus Tamur	020057
Stress level analysis of students on online mathematics course	Rospala Hanisah Yukti Sari and Dwi Sari Usop	020058
Exploration of mathematics teacher knowledge in lateral thinking techniques to develop creative thinking skills	Lukman Jakfar Shodiq, Puji Savvy Dian Faizati, and Bendot Tri Utomo	020059
Analysis of silent students mathematical communication based on mathematics anxiety	Zahid Abdush Shomad, Fadhilah Rahmawati, Budi Waluya, and Walid	020060
Mathematics pedagogical knowledge for slow learners teaching	Mukti Sintawati, Hanum Hanifa Sukma, and Arita Marini	020061
Mathematical creative thinking ability in solving social arithmetic problems in terms of the adversity quotient	Sri Solihah, St. Budi Waluya, and Nuriana Rachmani Dewi	020062
Student's mathematic communication ability review from student achievement motivation	Sugianto, St. Budi Waluya, and Nuriana Rachmani Dewi	020063

Analysis of students' metacognition in solving mathematics problem Mega Suliani, Dwi Juniati, and Agung Lukito	020064
Integration of local culture of Bugis-Makassar tribe A'bulu Sibatang, Assamaturu, Mappesabbi, Sipakatau based on Android to improve mathematical connection ability Sumiati, Andi Muhammad Irfan Taufan Asfar, and Andi Muhamad Iqbal Akbar Asfar	020065
Numerical verbal of a pre-school child: Case study on Qory Syarifuddin, Nasution, Andang, Edi Mulyadin, and Atmarita	020066
Existence of the unsteady heat conduction in Sobolev space and numerical technique with twenty-one global nodes Mohamad Tafrikan, Yolanda Norasia, and Mohammad Ghani	020067
A mathematical modeling for education Hardi Tambunan	020068
The effect of mathematics anxiety towards students' metacognition ability in 12th graders Patrisius Afrisno Udil and Israfil	020069
The level of mathematics reflective abstraction of pre-service elementary school teachers Nuhya Ulia, S. Budi Waluya, and Walid	020070
Creative thinking ability of prospective mathematics teacher in solving statistical problems based on self concept mathematics Rini Utami, St. Budi Waluya, and Walid	020071
The analysis of learning disciplines and mathematical concepts mastery on learning outcomes using structural equation modeling Virgana, Merry Lapasau, Acep Musliman, Sulis Setiawati, and Soeparlan Kasyadi	020072
Student's self concept, self regulated learning, and resilience mathematics during the Covid 19 Pandemic in Indonesia Sherly Yekti, Agustin Patmaningrum, Erdyna Etika, Addin Aini, and Reza Perdana	020073
Use of mathematical cryptanalysis on 'magic tricks' Benny Yong and Ethan Chang	020074
Exact solutions of time independent Schrodinger equation in cylindrical coordinates for conical pendulum Rizma Yudatama, Sutrima, and Ririn Setiyowati	020075
Application of the robust capacitated vehicle routing problem with time Windows model on gallon water distribution Evi Yuliza, Sisca Octarina, Ning Eliyati, Fitri Maya Puspita, and Yulisha Jesi Angela	020076

Preface: The 6th National Conference on Mathematics and Mathematics Education (SENATIK)

The 6th National Conference on Mathematics and Mathematics Education (SENATIK) was held by Mathematics Education Study Program, Universitas PGRI Semarang, Indonesia, in 11 August 2021. The seminar theme is Numerize and Digitize of Mathematics Toward Freedom of Learning. According to the theme, this seminar aims to improve mathematics teaching, solve mathematics problems, and expand mathematics contribution to society.

Freedom of learning is a policy implemented by the Indonesian Ministry of Education and Culture. Freedom learning encourages students to master literacy, numeracy, and character. Numeration is one of the ways to make mathematics easy. At the same time, it provides opportunities for students to collaborate, has critical thinking, creative thinking, communication, good character, and face the challenges of an increasingly global world with advances in science and technology. Having numeracy skills will impact good thinking patterns and habits associated with numbers or calculations with existing problems.

Along with the freedom learning program development during the COVID-19 pandemic, it is very clear that technological developments have a high impact on the education world. This impact also occurs in the learning process, especially in accessing information as a learning resource, both online and offline learning. The availability of abundant information and easily accessible also causes learning to experience a digitization process. The era of digitalization brings challenges as well as opportunities in the world of education. There is an opportunity to integrate technology into the learning process so that learning outcomes are more effective. The integration of technology in the learning process results in digitization in the education world, especially in the learning process. The findings that were discussed in the seminar: In mathematics learning and problem-solving, teachers and students need technology. Integration of mathematics and technology is a crucial process.

There are 151 manuscripts through the peer-review and end up with 76 papers which are published in this AIP Conference Proceeding. Together with the keynote speakers and the presenters, they shared their research results on different fields in the plenary and parallel sessions attended by more than 300 participants.

We want to thank the keynote speakers; 1) Prof. Helia Jacinto, Ph. D. (University of Lisbon, Portugal); 2) Dr. Rully Charitas Indra Prahmana, S.Si., M.Pd. (Universitas Ahmad Dahlan, Indonesia), and; 3) Dr. Muhtarom, M.Pd. (Universitas PGRI Semarang, Indonesia). Many thanks go as well to the speakers in the workshop session that are Sutrisno, S.Pd., M.Pd. (Universitas PGRI Semarang, Indonesia) and Dr. Muhtarom, M.Pd (Universitas PGRI Semarang, Indonesia). We also would like to thank all the committee for arranging this conference.

The conference's success is achieved due to the support and commitment of many people, and we acknowledge their contribution, especially all the participants and presenters. For all participants and presenters, we hope they enjoy the seminar, so they are valuable, rewarding and improving their knowledge and experiences.

Thank you,

Dr. Widya Kusumaningsih, M. Pd.

Chairman The 6th National Conference on Mathematics and Mathematics Education
SENATIK
2021

Abstract. Literacy skills include observing, processing, and evaluating problems. In addition, the development of technology creates a phenomenon of online games that are rife in students. This study aims to find out students' literacy towards solving math problems reviewed from online addiction level games. Four participants were selected from thirty-two students. Two students are addicted to online games, and two students are not addicted to online games. Test instruments and interview guidelines were used in this study to obtain student literacy. The results showed that students' literacy process of math problems addicted to online games is less able to be done well and tends to be hasty; some stages are still not appropriately met. Meanwhile, in students who are not addicted to online games, the literacy process goes well so that the steps of the literacy process are carried out in a systematic, and students can maximize the time in problem-solving.

INTRODUCTION

Literacy is the ability to access, understand, and use things intelligently through various activities, such as reading, seeing, listening, writing, and speaking. Literacy skills support the student's self-understanding process and demonstrate the ability to interact, communicate, even the ability to express something verbally and in writing [1][2]. To improve the School Literacy Movement (GLS), several guidelines related to this have also been published in 2016 by the Ministry of Education. Nevertheless, Joyo [3] explained that literacy skills had not produced maximum results because of the low awareness of student and teacher literacy.

Literacy is a necessity that humans need as the basis for lifelong learning, which covers various aspects of life [1][4][5]. Mathematical literacy is an individual's ability to formulate, apply, and interpret mathematics in various life contexts. Capabilities include mathematical reasoning and mathematical concepts, procedures, facts, and tools for describing, explaining, and predicting phenomena. These abilities help individuals recognize the role of mathematics in the world and make judgments on the nature of constructive decision-making, related and reflection of citizens [4]. Wati, Muhtarom, and Sugiyanti [6] suggests that the stages of the mathematical literacy process are identifying mathematical aspects of a problem context in real life and identifying known variables; determining mathematical models and simplifying problems; designing and applying strategies to find solutions; determining mathematical facts, procedures, algorithms, and models when searching for answers; reflecting, describing and determining mathematical outcomes; interpreting mathematical results and evaluating mathematical solutions into

real-life contexts. Literacy skills are very influential to the success of students in learning. With good literacy, students can understand spoken text, writing, and images [7].

In addition to literacy skills that become an essential discussion in this modern era, there are also various phenomena of technological advancement. One of the obvious is that many students are online game addiction. Online game addiction has been reported of its impact on several aspects of life, including health, psychologically, academically, socially, and financially [8][9]. This is in line with Zhang, Qin, & Ren [10], which states a significant negative relationship between online gaming addiction and learning achievements. If the variable score of online gaming addiction increases, then the learning achievement variable score will decrease.

Conversely, if the variable score of online gaming addiction decreases, then the learning achievement variable score will increase. The danger of the phenomenon of online gaming addiction is that the behavior of playing online games continues to be repeated and habituated so that the dopaminergic pathways in the brain will strengthen and settle to cause dependence [11][12]. Eventually, it will reinforce the reactive system and weaken the reflective system to decrease its cognitive abilities. Kusumadewi [13] said that someone addicted usually uses 2 -10 hours per day to play online games. This was also used by Kusumawati, Aviani, & Molina [14] as a reference in her research related to the difference in the level of addiction to online games. The duration of playing online games is less than 2 hours is categorized as low level, duration between 2 - 10 hours has been classified as medium level, and playing online games for more than 10 hours in the space of a week is categorized as high level. Playing online games for more than two hours per day is a form of addiction [15]. Based on the description above, then problem formulation in this study is how the literacy of math problems by students who are addicted and who are not addicted to online games solves math problems?

METHOD

The method was used in this study is descriptive qualitative. Questionnaires are given to students to see the level of addiction of students to online games. Indicators of online gaming addiction, among others; compulsion, which is the urge to perform continuously; withdrawal, i.e., difficulty to withdraw or distance yourself from things related to online games; tolerance, tolerance here is related to time, where an online gaming addict can't stop playing before feeling satisfied; interpersonal and health-related problems, related to interactions with others and also health problems. The results showed that as many as four students stated that dating was playing online games, and twenty-eight students were not addicted to playing online games. A total of four students were selected as respondents to the study, namely two students addicted to online games (RAW and SRD) and students addicted to online games not addicted to online games (ASA and NWK). Data collection is conducted with written tests related to the material of The Two-Variable Linear Equation System and interviews related to the literacy process of mathematical problems with indicators, including 1) formulating problems systematically; 2) applying concepts and procedures; and 3) applying, and evaluate the calculation results. Source triangulation is used to obtain the validity of research data. The results were analyzed using data reduction techniques, data presentation, and withdrawal of research conclusions [16].

RESULT AND DISCUSSION

Literacy Process for Students Addicted to Online Games

The results of written work and interviews show that raw and SRD subjects have not formulated problems properly. Both subjects can understand the problem but have not been able to identify known variables in the problem. Subjects are not able to create mathematical models of literacy problems given but can simplify problems. It appears that the subject is less able to formulate the problem systematically. This is seen when the subject can write down the information obtained by understanding the problem. Subject writes down the information obtained from the situation by creating a table. The subject wrote this because there was a memorandum showing the purchase of a notebook and a ballpoint by two students at the school cooperative. The message only showed the total price of the purchase of the two items. But in the answer also indicates that the subject is less able to make mathematical models. Fig. 1 obviously shows the result of written work on the subject of SRD.

A.

Name of item	Lots of item	Price
Book	3	9000
Pen	2	4000
Amount		13.000

Name of item	Lots of item	Price
Book	2	6000
Pen	3	6000
Amount		12.000

FIGURE 1. SRD subject results in formulating problems.

The results of written work and interviews show that both subjects cannot apply facts, concepts, procedures, and reasoning well and logically in finding solutions to problems. The subject does not use that mathematical concept. In finding solutions or problem solving is done with mathematical procedures that are not systematic. Fig. 2 obviously shows that SRD subjects cannot apply the right concept to find a solution to a given question. Compared to using the concept of elimination and substitution to the linear equation of two variables, that should be done. The subject prefers an instant way that it guesses randomly on a given question. The subject's answer also indicates the absence of a mathematical model is created.

B. Book price = $9000 : 3 = 3000$
 Pen price = $4000 : 2 = 2000$
 Price differences = $3000 - 2000$
 $= 1000$
 The more expensive item is the book

FIGURE 2. SRD subject results in applying concepts and procedures.

Both subjects were able to apply and evaluate the calculation results well. The subject is able to make a final settlement or conclusion of the answer from the question. The interpretation of the problem and the application of calculations have been made well. For example, Figure 3 shows that the subject of SRD is able to apply and evaluate the calculation results because it can already make a settlement or provide a conclusion answer to the question given.

B. Book price = $9000 : 3 = 3000$
 Pen price = $4000 : 2 = 2000$
 Price differences = $3000 - 2000$
 $= 1000$
 The more expensive item is the book

C. 5 books + 5 pens = $5(3000) + 5(2000)$
 $= 15000 + 10000$
 $= 25000$

FIGURE 3. SRD subject results in evaluating calculation results.

Literacy Process for Students Who Are Not Addicted to Online Games

The results of written work and interviews show that ASA code and NWK subjects can formulate problems systematically and well-constructed; it appears that the subject can recognize the problem and identify known variables and asked well, can also write them as follows part of the composition of the answer. Subjects can create mathematical models of literacy problems given as well as simplify problems. Figure 4 shows that the scoffer can write down what is known in the question and each question point. Student A bought three books with two pens for

Rp 13,000, and student B bought two books with three pens for Rp 12,000 well written. The subject wrote this because a memorandum showed the purchase of a notebook and a ballpoint by two students at the school cooperative. The memorandum only showed the total price of the purchase of the two items. Subjects can create mathematical models by dissociating variable x as a book and variable y as a pen. Then the ASA subject creates a linear equation of two variables from the identification of the problem, namely, $3x + 2y = 13,000$ and $2x + 3y = 12,000$.

Is Known
 A bought 3 books and 2 pens for 13.000
 B bought 2 books and 3 pens for 12.000
 Asked
 a. problem identification and mathematical model
 b. the price of each item, price differences between books and pen, the more expensive item.
 c. The price of 5 books and 5 pens
 answer
 a. problem identification
 student A bought 3 books and 2 pens for 13.000
 student B bought 2 books and 3 pens for 12.000
 mathematical model
 assume $x = \text{book}$, $y = \text{pen}$
 so,
 $3x + 2y = 13.000 \dots (1)$
 $2x + 3y = 12.000 \dots (2)$

FIGURE 4. ASA subject results in formulating problems.

Both subjects are able to apply facts, concepts, procedures, and reasoning well and systematically find solutions to problems. The subject applies the appropriate mathematical concepts and seeks solutions with routine mathematical processes. Fig. 5 as clearly that the subject can use the right idea to find an answer to the given question by applying the concept of elimination and substitution to the linear equation of two variables. The acquisition of variables x and y also demonstrates the subject's ability to apply facts in solving problems.

b. Elimination
 $6x + 4y = 26.000$
 $6x + 9y = 36.000$
 $-5y = -10.000$
 $y = 2000 \dots (3)$
 Substitute equation (3) into equation (2)
 $2x + 3(2000) = 12.000$
 $2x = 12.000 - 6000$
 $x = 3000 \dots (4)$
 \therefore the price of each item
 - the price of one book is 3000
 - the price of one pen is 2000
 the difference between the price of a book and a pen is 1000
 the more expensive item is the book

FIGURE 5. ASA subject results in applying concepts and procedures

Both subjects were able to apply and evaluate the calculation results well. The subject is able to make a final settlement or give the conclusion of the answer to the question. Fig. 6 is precise that the subject is organized to the point of final completion or provides a decision to the answer to the question given.

The image shows a student's handwritten work on lined paper. It consists of three equations and a concluding statement. The equations are:
1. $5x + 5y = 5(3000) + 5(2000)$
2. $5x + 5y = 15.000 + 10.000$
3. $5x + 5y = 25.000$
Below the equations, the student has written: \therefore the price of five books and five pens is 25.000.

FIGURE 6. ASA subject results in evaluating calculation results.

The results showed that 4 out of 32 (12.5%) students who were respondents to the study belonged to the online gaming addiction group. This is in line with the results of research Novrialdy [8], which states that 10.15% of adolescents in Indonesia are indicated to experience second-hand online gaming. Concluded also that students with addiction to online games are only able to meet some indicators of the stages of the mathematical literacy process. Students give answers faster than deadlines; the answers given are not maximal enough with less precision. This aligns with Zhang, Qin, & Ren [10] state that online gaming addiction is related to learning achievements because online games make students accustomed to dynamic stimuli. There are exciting things that can be seen from students who are addicted to online games. Although the problem solving is less systematic, students with online gaming addiction have a good side in evaluating the calculation results. Problem work solutions widely demonstrate the tendency to think through alternative means and be more focused on the correct end result. The point of view is focused on one standard way, showing students' creative side in solving problems. This is also in line with Ulya & Wardono [5], which suggests that playing online games can develop students' more creative way of thinking. Creativity is the ability to find solutions in other ways. Meanwhile, students who are not addicted to online games can already fulfill every stage of the literacy process. Students is more disengaged with online games, so tend to be hasty in learning—students who are not addicted to online games systematically [6][7].

CONCLUSION

Student's literacy addiction to online games in solving mathematical problems still do not meet the indicators of formulating problems systematically and applying concepts, procedures, and reasoning. However, students are able to meet the indicators using and evaluating the calculation results. Students who are addicted to games tend to be hasty and less thorough in solving math problems. In comparison same time, students who are not addicted to online games in solving mathematical problems are able to do every stage of the literacy process against math problems well. Students and show thoroughness in solving math problems. Students in an organized, clear, and accurate way of gathering information, applying concepts, procedures, doing calculations, and concluding answers well. Thus, it is recommended that people who are addicted to online games need to develop a literacy process against math problems and perform every stage of the literacy process. There is no harm in playing online games, but with reasonable limits, online games are precisely good for developing student reasoning.
